Experiment-1

Student Name: Gurveer Singh Mangat

Branch: B.E-C.S.E

Semester: 5th

Subject Name: DAA

UID: 23BCS11074

Section/Group: 23KRG-1A

Date of Performance: 25/08/2025

Subject Code: 23CSH-301

1. Aim: Analyze if the stack is empty or full, and if elements are present, return the top element in the stack using templates. Also, perform push and pop operations on the stack.

2. Objective: To understand stacks.

3. Input/Apparatus Used: Stack are implemented using templates.

4. Procedure:

Step1: Create stack.

Step2: Check underflow and overflow condition.

Step3: Increment top to store element in stack.

Step4: Decrement top after removing element from stack.

Step5: Check if stack is empty or not.

5. Code:

Exp 1 > C++ Exp_1.cpp

```
1  #include <iostream>
2  using namespace std;
3  template <class T>
4  class Stack {
5  private:
6      int top;
7      int capacity;
8      T* arr;
9  public:
10     Stack(int size) {
11         capacity = size;
12         arr = new T[capacity];
13         top = -1;
14     }
15     ~Stack() {
16         delete[] arr;
17     }
18     void push(T value) {
19         if (isFull()) {
20             cout << "Stack Overflow!\n";
21         } else {
22             arr[++top] = value;
23         }
24     }
25     void pop() {
26         if (isEmpty()) {
27             cout << "Stack Underflow!\n";
28         } else {
29             top--;
30         }
31     }
```

```
32     T peek() {
33         if (isEmpty()) {
34             cout << "Stack is empty.\n";
35             return T();
36         }
37         return arr[top];
38     }
39     bool isEmpty() {
40         return top == -1;
41     }
42     bool isFull() {
43         return top == capacity - 1;
44     }
45 };
46 int main() {
47     Stack<int> s(5);
48     s.push(10);
49     s.push(20);
50     s.push(30);
51     cout << "Top: " << s.peek() << endl;
52     s.pop();
53     cout << "Top after pop: " << s.peek() << endl;
54     s.push(40);
55     s.push(50);
56     s.push(60);
57     s.push(70);
58     while (!s.isEmpty()) {
59         cout << "Popping: " << s.peek() << endl;
60         s.pop();
61     }
62     s.pop();
63     return 0;
64 }
65
```

6. Output:

```
PS D:\DAA> cd "d:\DAA\Exp 1\" ; if ($?) { g++ Exp_1.cpp -o Exp_1 } ; if ($?) { .\Exp_1 }
● Top: 30
  Top after pop: 20
  Stack Overflow!
  Popping: 60
  Popping: 50
  Popping: 40
  Popping: 20
  Popping: 10
  Stack Underflow!
○ PS D:\DAA\Exp 1>
```
